Summary

Final-year CS undergraduate and full-stack engineer building resilient backends and responsive web applications. Experienced across the full delivery lifecycle—Spring Boot services, React frontends, Docker containers, database migrations, and CI/CD pipelines. **600+ algorithmic problems solved** on LeetCode and other platforms. Proven record of shipping production systems under tight deadlines and actively expanding into distributed architectures.

Technical Skills

Backend: Spring Boot, REST APIs, Microservices

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Data & Messaging: PostgreSQL, Redis (Caching & Rate Limiting), Apache Kafka (Event Streams), Flyway

DevOps & Tools: Docker, Docker Compose, Nginx, GitHub Actions (CI/CD), Git, Testcontainers, Swagger / OpenAPI

Foundations: Data Structures & Algorithms, Operating Systems, OOP

Languages: Java, JavaScript, TypeScript, Python, C

Experience

Veterans India | Backend Developer Intern

Remote, India | Oct 2025 – Dec 2025

- Built REST APIs with Spring Boot, standardizing DTO validation and response structures; integrated with frontend to deliver volunteer onboarding ahead of sprint deadlines.
- Hardened APIs with authentication filters, request validation, and sanitized data flows to mitigate injection and unauthorized-access risks.

SkyInvestments | Freelance Full-Stack Developer

Live | Jan 2026

- Delivered a production-ready investment consulting web platform from concept to deployment within a 5-day stakeholder turnaround.
- Configured role-based session workflows with NextAuth and eliminated redundant DB lookups via an in-memory Redis caching layer.

Featured Projects

URL Shortener

GitHub

Tech Stack: Spring Boot, Redis, React, Docker, CI/CD

- Built a link-shortening service with Base62 key generation, custom aliases, TTL-based expiration, and per-user ownership isolation.
- Reduced redirect latency with Redis caching and sliding-window rate limiting; containerized via multi-stage Docker builds with Nginx, Flyway, and GitHub Actions CI using Testcontainers.

EduNest – E-Learning Platform

Live

Java 21, Spring Boot, PostgreSQL, Spring Security, JWT, Flyway, Docker

- Built a modular-monolith EdTech platform with JWT authentication, RBAC, instructor verification, course discovery, enrollment, and ownership-based access control across the Course → Section → Lesson curriculum hierarchy.
- Developed RESTful APIs for lesson progress, quizzes, assignments, and automated/manual assessments, implementing server-side validation, transactional business logic, PostgreSQL persistence, versioned Flyway migrations, Dockerized infrastructure, and integration testing.

Multi-Tenant Developer API Management Platform

GitHub

Tech Stack: Java 21, Spring Boot, Spring Security, PostgreSQL, Redis, Kafka, React, TypeScript, Docker, OpenAPI

- Developed a B2B SaaS platform for API registration, API-key lifecycle management, RBAC, tenant-level quotas, rate limiting, and usage monitoring.
- Secured control-plane and gateway flows with Spring Security; enforced tenant-isolated data access with Redis-backed caching and rate limiting.
- Implemented Kafka-driven async metering, analytics, and audit logging within a modular-monolith separating control-plane and data-plane concerns.

Education

Guru Ghasidas University, Bilaspur, Chhattisgarh

Expected Graduation: 2027

Bachelor of Technology in Computer Science Engineering

CGPA: 8.44

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks

Achievements & Leadership

- **Problem Solving:** Solved **600+** algorithmic challenges across LeetCode and other competitive platforms.
- **Google Developer Groups on Campus (GDGC):** Core contributor in OS and CP tracks; mentored students and led workshops on OS internals and algorithmic problem-solving.
